

Get on the right track.

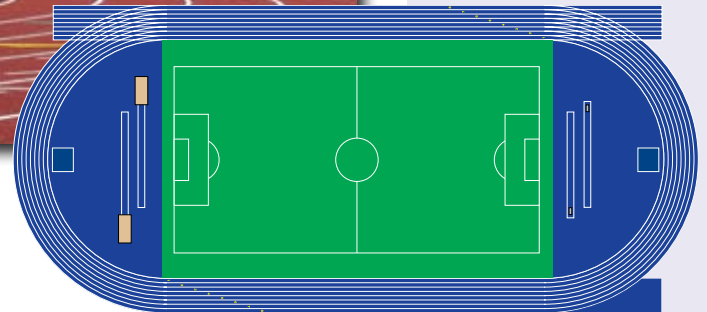

Hurricane goes the extra mile.

Why you should choose Hurricane running tracks

Hurricane offers a complete line of professionally installed track surfaces, as well as design from concept to reality.

We offer complete site construction including asphalt base, curbing, fencing, sidewalks and more.

Our success is defined by the quality and longevity of our workmanship, our superior customer service and our client's satisfaction.

"Their expertise, supervision, hands-on laboring, and attention to detail are qualities I highly respect. And, Hurricane Running Tracks went well beyond the call of duty to ensure that we were elated with our track facility when it was finished."

– Noel Ruebel
Head Track Coach
Forsyth Country Day School
City and State

Track repair and resurfacing

Track surfaces can naturally deteriorate over time.

Problems can occur with

- Fading
- Spike damage
- Worn lines and markings
- Delamination
- Water and drainage
- Grass intrusion

Hurricane prides itself in the development of several repair techniques, from our high pressure deep flood system, to textured recoats and professional line striping. Let Hurricane address these issues to restore and rejuvenate your existing track.

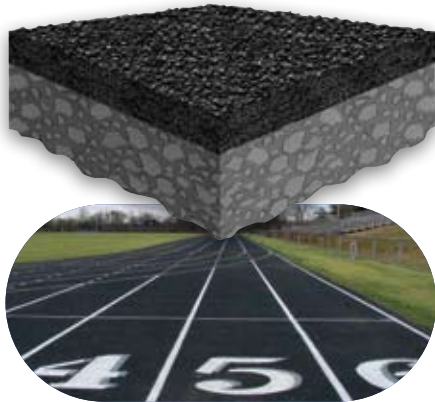

"After twenty five years in the business, your work is as good as it gets. Hurricane running tracks always gives our clients more than they expect."

– Tom Tupps
President
Athletic Facilities Consulting
City and State

Hurricane latex track surfaces

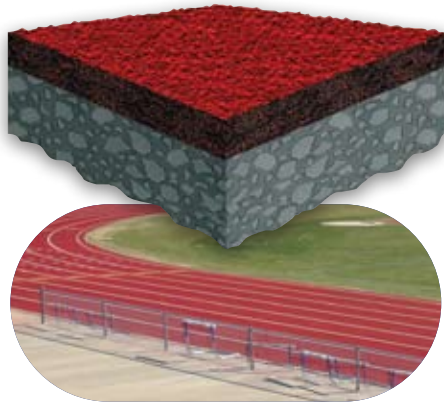

H100

The H100, our most affordable track surface, provides enhanced safety and performance. The high quality black rubber granule base mat is evenly applied in layers using pigmented water-based binder throughout. The top coat offers UV protection and prevents premature wear.

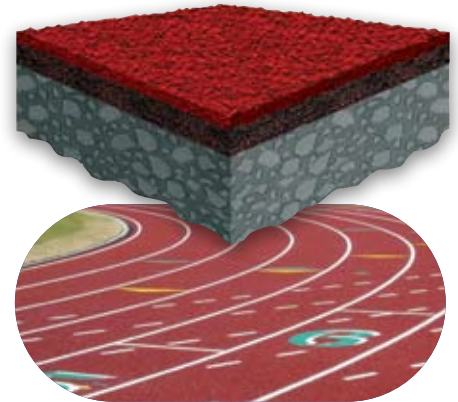

H200

The H200 allows you to choose from a variety of colors. It provides the same benefits as the H100 but features color binder throughout, as well as the same great top coat for maximum UV protection.

H300

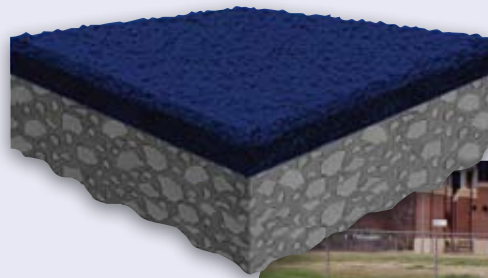

The H300 is our optimal water-based track surface. This is the same black rubber base mat but with an enhanced top layer comprised of color EDPM rubber granules providing spike resistance, maximum color depth, performance and longevity.

Hurricane polyurethane track surface

H400

The H400 is our top performing running track. A prefabricated rubber base mat, made to exacting standards, is adhered directly to the existing surface. The highest grade polyurethane is applied, then embedded with colored EPDM rubber granules. It provides a uniform surface, optimal shock absorbency, and consistent energy return.
